

AI MARKING AGENT

# Your marking, calibrated to your standards.

*Research-grade marking AI built with UK university partners.*

*Pilot deployments running now.*

---

FOR UK UNIVERSITIES · PRO-VC, MARKERS, EXTERNAL EXAMINERS

## THE PROBLEM

# Marking is the bottleneck.

A 200-paper batch costs 100 hours of marker time.

Calibrating a new marker to your team takes weeks.

External examiners need an audit trail you don't have time to write.

**30 min**

per paper of marker time

**Weeks**

to calibrate a new marker

**Hours**

compiling the audit trail

*"It's not a generic AI marker. It's your marker, calibrated to your judgement."*

# The calibration loop.

*Six steps from first upload to a calibrated marking partner.*

**1**

## Upload

Mark scheme, manual or PDF.

**2**

## Submit

Bulk upload of papers.

**3**

## Grade

Per criterion, every paper.

**4**

## Correct

You adjust where needed.

**5**

## Learn

Standards lock in.

**6**

## Converge

Gap closes per batch.

---

## Built on UK infrastructure

### Azure OpenAI UK South

Your data stays in the UK.

### Temperature = 0

Identical input gives identical output.

### Audit trail per paper

Every score, rationale, correction logged.

### No public-model retraining

Your data, your students, your IP.

# Three concrete savings.

| Metric         | Manual            | Marking Agent             |
|----------------|-------------------|---------------------------|
| Time per paper | ~30 minutes       | <b>Under 2 minutes</b>    |
| 30-paper batch | Full marking day  | <b>Minutes</b>            |
| Calibration    | Weeks of training | <b>3 batches</b>          |
| Audit trail    | Hours per module  | <b>Seconds per export</b> |
| Consistency    | Varies            | <b>Deterministic</b>      |
| Onboarding     | Weeks             | <b>One-time setup</b>     |

**~15x**

**faster per paper**

*Calibration converges within 3 batches.*

## TIME PER PAPER

**From 30 min to under 2.**

*Pilot data with UK university partners. Verified per-institution figures coming as we close research data.*

# Research-grade tooling, UK infrastructure.

## DATA RESIDENCY

Azure UK South. Data does not leave the UK.

## GDPR ARTICLE 28

Standard DPA template. Sub-processor list public.

## RESEARCH-GRADE

Built and tested with UK university partners. Pilot / pre-commercial.

## CALIBRATION VERIFIED

Temperature = 0 across all calls. Every paper auditable.

## PILOT DATA PRESERVED

Read-only on lock — never deleted.

## WHY EXCOMS

### It's not a generic AI marker.

*It's your marker, calibrated to your judgement — built with UK universities, deployed on UK soil, transparent to external examiners.*

NEXT STEP

# Ready to see it on your own marking?

*We're working with UK university partners on pilots and R&D collaborations. Contact us to scope what's right for your institution.*
